

Section 6. The Learning Ladder (how different minds should enter CUWF)

A canonical multi-path reading approach is explicitly recommended:

Beginners: start with the Simplified form (with metaphor), then grow toward unified/expanded/compact.

Engineers/simulation: Simplified -> PDE, while avoiding the "optimization fallacy."

Philosophers: One-Line -> Simplified -> Raw -> PDE (optional).

This is not cosmetic. CUWF is intentionally built as a "multi-language theory," where the same truth must be expressed with different grammars.
